

Convert PDF to Image using Python

Last Updated : 23 Feb, 2026

In Python, we can easily convert PDF pages into images using the pdf2image module along with Poppler. This is useful for tasks like image processing, document sharing, or creating thumbnails.

In this tutorial, we will learn both basic PDF-to-image conversion and how to create a simple GUI application using Tkinter.

Modules Required

1. **pdf2image**: Converts PDF pages into PIL Image objects. Install it using the below command.

```
pip install pdf2image
```

[Python Tutorial](#) [Data Types](#) [Interview Questions](#) [Examples](#) [Quizzes](#) [DSA Python](#) [Data Science](#) [NumPy](#) [Pandas](#) [Sign In](#)

- **Windows**: [click here](#) to download. Add the bin/ folder to PATH or provide the path in your code:

```
poppler_path = r"C:\path\to\poppler-xx\bin"
```

- **Linux**: use the below command:

```
sudo apt-get install poppler-utils
```

Basic PDF to Image Conversion

1. Import the pdf2image module.
2. Use convert_from_path() to read the PDF.
3. Save each page as an image using save().

To Download the pdf used in this article, [click here](#)

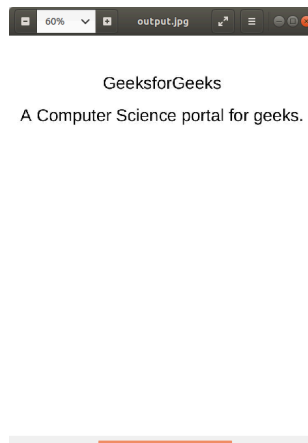

```
from pdf2image import convert_from_path

images = convert_from_path('example.pdf')
for i in range(len(images)):

    images[i].save('page'+ str(i) + '.jpg', 'JPEG')
```

Output

Creating a GUI Application using Tkinter

We can also create a user-friendly GUI so that a user can enter the PDF file path and click a button to convert it into images.

```
from pdf2image import convert_from_path
from tkinter import *
from tkinter import messagebox
import os

def pdf2img():
    try:
        pdf_file = str(e1.get())
        if not os.path.exists(pdf_file):
            raise FileNotFoundError

        images = convert_from_path(pdf_file)
        os.makedirs('new_folder', exist_ok=True)

        for i, img in enumerate(images):
            img.save(f'new_folder/page{i}.jpg', 'JPEG')

    except FileNotFoundError:
        messagebox.showinfo("Result", "PDF file not found!")
    except Exception as e:
        messagebox.showinfo("Result", f"Error: {e}")
    else:
        messagebox.showinfo("Result", "Conversion Successfull!")

master = Tk()
master.title("PDF to Image Converter")

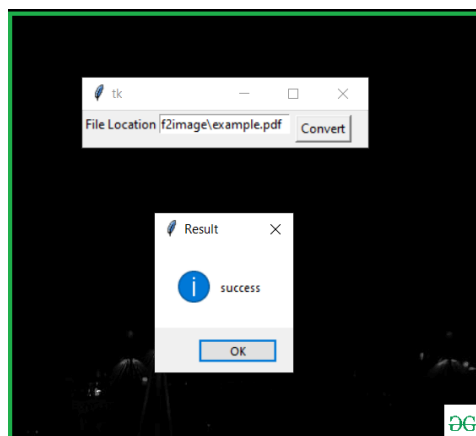

Label(master, text="PDF File Path:").grid(row=0, sticky=W)

e1 = Entry(master, width=40)
e1.grid(row=0, column=1)

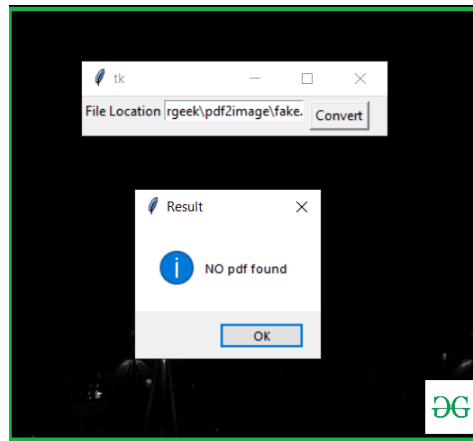

b = Button(master, text="Convert", command=pdf2img)
b.grid(row=0, column=2, padx=5, pady=5)

mainloop()
```

Output

If there is no PDF file at your given location.
